

HCRCC - AT THE FLYING FIELD MID - AUGUST

Neither heat, nor humidity nor blazing sun shall prevent these diehard HCRC club members from their appointed rounds at the flying field. These faithful fliers have kept the faith even when it is..... Georgia in the summer time! JRM

John Benario provides a hover for the camera while putting his Turbulence D-3 through its paces Sunday afternoon. Powered by a modified OS90, this HIROBO heli feels right at home with John at the controls.

Not sure whether Jay Andrews was more pleased with his foamy electric powered T-28 or 3 year old granddaughter Aniyah. The T-28 is by Horizon Hobbies with an 11 volt Lipo battery providing 30 minutes flying time per charge.

Nolan and Andy Ripple prepare their SIG ARF Sun Dancer for flight Sunday. A TGY 52 powers the 14 lb plane w/a DX-7 radio.

As if the Sun Dancer was not enough excitement, here Andy is shown launching an Extreme Flight "Outlaw" for son Nolan who is about to tear up the sky with high speed passes in excess of 100 MPH.

After a number of last minute construction and rigging problems, the day finally came for Earl Alliston and his SIG Senior Kadet for the big **FIRST FLIGHT**.

Here Jim Brooks and Earl perform the final engine run Tuesday morning prior to the first flight. Following a textbook takeoff and a few trips around the traffic pattern, Jim announced "hands off trim" had been reached and he was pronouncing the Senior Kadet airworthy. Earl was a happy gent and took the big blue beauty home for a careful post flight inspection. Way to go Earl!
