

At The Field 3

Aug 25

HCRCC

Nick Syracuse brought to the field his McDonald Douglas T-45 USN – jet trainer he bought as a plug-n-play from Free Wing. It is powered by a single 90 size ducted fan and uses a Success 5000 mAh 22.2 volt battery. Nick uses a Spektrum DX-18 radio system and he installed a sound system in this **very quick bird**.

Ed Moore showed off his new 104 inch wing span Top Flite Cub at the field Tuesday. This one sports a DLE 20 Gas engine and Ed uses a Futaba radio system to control it. He says he is still getting used to the new bird and has around a dozen flights on it now. Always a few Cubs at the field but this one is a little larger, slicker and flies with a little more authority than most.
